

Safe

Safety is the highest priority for us at Automated Openings.

The Intelligent Door Automation system was developed with multiple safety features to protect you and the ones you love. Overhead motion sensors continuously monitor the area surrounding the door and the pressure sensing technology quickly detects objects that have blocked the doors travel.

Smart

Developed using the most advanced technology available today.

With over 25-years of experience the engineers at Automated Openings have developed the highest quality door automation system on the market. The Intelligent Door Automation system knows what position your door is in at all times. It can detect if you have experienced a power outage, and will even sense if your door is manually locked.

Simple

Control and change the way your door operates with the push of a button.

The Intelligent Door Automation system is controlled by an elegant color touch screen or from your home automation system. From the menu page you can quickly set the method in which your door opens and closes by choosing 1 of 3 different themes.
